LED Load Resistor Kit

R-50W-6OHM-5%

R-50W-3OHM-5%

R-25W-25OHM-5%

Turn Signal Fix

This series resistors can be connected across the turn signal bulbs to simulate the load of a regular filament bulb (2 Amp load). This will solve LED/HID related turn signal problems such as hyper flashing, no flashing or burnt out bulb indications. One resistor is required for each turn signal bulb.

Installation Instructions:

Using splice taps, connect one wire to ground and the other wire to the turn/brake wire. You don't have to cut your car's wiring. Squeeze splice taps with pliers. One Load Resistor required for each turn signal bulb.

Remark:*The power and tolerance can be especially customized for customers*
